

ZIRCON AAR APPROVED GRAPHITE LUBRICANTS

ZIRCON'S PROCESSED GRAPHITE DRY FILM LUBRICANT

- Air dries rapidly and adheres “tenaciously” to surfaces with a minimum preparation of prepping surfaces.
- Thinness of the coating coupled with “High Lubricity” provides long wearing lubrication without redesign of component dimensions or reapplication.
- Fast curing time creates a lubricity that resist “metal to metal” erosion and provides a lubricant that has tested to 24,000 cycles* without deterioration of wear.

**Institute for Research, Inc., Houston, TX-2/14/95*

AREAS OF APPLICATION

- Autorack Equipment-Chains, Tracks, Tie-Down Chalks, Hinges, Switches, Couplings, etc.
- Internal Combustion engine components (Assembly and Break-in)
- Automotive & Industrial Gaskets
- Thread Lubricant (anti-seize)
- All metal to metal wear
